

Project Activity Log

Name: Seth King
Student ID: 0985295
Email: kingsd@clarkson.edu

Executive Summary:

I worked on the app mostly, I have multiple branches of different implementations of the app (all with crazy names), Yohanzel was the other person primarily working on the app with me, each of these branches should have multiple sets of commits within them.

I have been one of if not the leading voice of the group, I have been delegating tasks, and calling for meetings.

Date	Time (Min)	Activity Description
2026-02-10	30	First Meeting
2026-02-12	75	Class
2026-02-17	45	Gantt Chart in excel, ill preface with I was unaware on how to use excel, so I spent a good amount of time working in excel
2026-02-17	35	Meeting 2
2026-02-24	60	Gantt Chart (created a more refined version)
2026-02-24	35	Meeting 3
2026-02-24	30	Gantt Chart finalization
2026-03-03	40	Meeting 4
2026-03-04	60	Meeting With User
2026-03-05	75	Class
2026-03-10	60	Rough UI implementation

Date	Time (Min)	Activity Description
2026-03-10	40	Meeting 5
2026-03-11	20	Meeting With User
2026-03-12	75	Class
3/15-20	-	Break
2026-03-24	20	Meeting With Users
2026-03-31	30	This was when I made one of the first implementations of UI other than the basics on the previous one, we had gotten the design documents from our users, and I implemented a very basic version, It had the green and gold colors, as well as a search bar directly on the home screen, and implementation of the sidebar(not even having all of the screens) (it was very basic and jank)
2026-03-31	45	Meeting
2026-04-02	60	Base level implementation of search, and some UI, that includes updating the sidebar (action toolbar) making it clickable, and first implementation of fragments.
2026-04-05	75	Class
2026-04-07	30	Working on search some more, got distracted making lot card class / handlers, to help create stuff to search through other than the string I was working with before
2026-04-07	40	Meeting
2026-04-09	75	Class
2026-04-14	60	Meeting
2026-04-16	45	Finishing the search fragment implementation (somewhat finished, it only searched through an array of data, didnt allow you to click / go anywhere, but could search / update)
2026-04-16	30	Meeting
2026-04-16	90	Yohanzel had implemented lot cards / a lot card fragment (the screen you go to when you click on the card), the lot cards he implemented were hardcoded (the xml had like 6 cards on it with the data inside it already), so I changed it to create the lot cards based on the information provided, added back buttons, and connected search clicks to specific fragments.

Date	Time (Min)	Activity Description
2026-04-21	75	Class
2026-04-21	30	Meeting
2026-04-21	20	Presentation / Helping my other groupmates on database stuff
2026-04-22	90	Implementing json parser in the app, testing on local jsons (used gson), implemented the class for information transfer between fragments, helped groupmates with database setup.
2026-04-23	120	Applying some final testing / updates (added color change/ trying to implement database transfer to app, was working on cross wifi, and practicing transferring between all of our systems) and spending time on the powerpoint for the presentation. (The 120 is split between multiple hours of the whole morning from 9 - 1:30 , we worked a lot of trying to get the final transfer stuff setup for the demo.)
2026-05-03	35	Fixing thread glitch and final testing
